How to understand your monthly half-hourly electricity invoice

Rota Disconnection Code

In exceptional circumstance, there could be a severe shortage of electricity production in the UK and distribution areas may be required to disconnect electricity to customers for a set direction, on a rota basis. For this reason, electricity users in the UK are grouped into blocks and each is given a code known as the Rota Disconnection Code.

Finance Reference

2 Your Account Number is for payment purposes. Quote this number when making payments or speaking to our Finance teams.

Account Number

3 Each of the sites in your group has a unique reference code, this is called the Account Number.

Invoice Period Start/End

The Invoice Period Start and End dates show the month that you are being billed for.

Site Address

This is where the electricity supply is being used.

Amount Due

This is the amount you are due to pay for this invoice period.

Payment TypeThis section give

This section gives details on how you should pay your bill and when.

Reactive Power

8 Reactive power is the difference between 'working power' and the total power consumed at your site. Reactive power is generally required when magnetic fields (necessary in transformers and motors) reduce the electrical current.

MPAN

The Meter Administration Number (MPAN) shown on your bill is a unique identification number relating to the meter at your site. When we ask for or refer to the MPAN we're usually referring to the core MPAN which is the 13 digits on the bottom line.

Day Units

10 This shows the volume of electricity (kWh) you've been charged for at the Day Unit rate (p/kWh)

Night Units

11 This shows the volume of electricity (kWh) you've been charged for at the Night Unit rate (p/kWh)

Availability

12 This is sometimes called Agreed Capacity. Availability is set by the local Distribution Network Operator (DNO) and maximum demand at the site should not exceed this at any time.

Standing Charge

13 The Standing Charge is a fixed charge for costs associated with providing your electricity supply. This is calculated by multiplying the bill period (days) by the fixed price (p/Day).

Levy Charges

Your Levy Charges may include a Climate Change Levy (CCL) charge or Levy Exempt Backed (LEB) charge. CCL is a tax paid by non-domestic customers at a rate set by the Government. This is calculated by multiplying your usage (kWh) by the levy rate (p/kWh). The LEB charge will appear on your invoice instead of CCL if you've chosen our LEB product. This charge covers the cost of matching your electricity volumes with renewable energy purchases.

VAT Charges

VAT is added to your invoice at the appropriate government rate.

These items might also appear on your bill

Excess Capacity

If your site consumes more than its Availability (Agreed Capacity), you will be charged an excess fee (per unit).
